

CIS 1068 Assignment 1

Greetings

Due: Tuesday, January 18

20 points

description

Your program will consist of a single Java file, which you should call `Greeting.java`. The program should print a message mentioning your lab instructor by name

For example, your program might print something like

```
| Good morning, Professor Dumbledore.
```

(that is, if you're in Professor Dumbledore's lab section this semester.)

Include a comment at the beginning of your program with some basic information about the assignment, for example:

```
| // Your Name  
| // The Date  
| // Assignment 1. Greetings  
| //  
| // Very brief description of what the program does  
| //
```

The purpose of this assignment is to make sure that you have the needed accounts, that you can edit, compile, and run Java programs, and that you are able to upload your assignment. Though the official due date is not until Tuesday, January 18, you are strongly encouraged to begin to practice writing short programs as soon as possible.

how to submit

Please submit your assignment through Canvas. Your laboratory instructor will go over how to do this during lab.
